Ossia VMS – Video Management Software

At Provision-ISR, we have merged our extensive experience in the video surveillance market with the expertise of our software developers to bring you OSSIA VMS: a cutting-edge security solution that significantly enhances your user experience when dealing with multiple devices or users in the local network or even spread across different geographical locations.

Ossia VMS Standard

The Ossia VMS STANDARD version (**100% License Free**) supports up to **256** cameras and supports Provision-ISR's products and other brand devices. Ossia VMS Standard is a feature-rich platform with real-time viewing, centralized recording, local and remote playback, backup, alarm management, video wall support, and keyboard control.

Main features

- Intelligent dashboard
- Remote device settings
- Complete live view (support for fisheye, PTZ control, instant playback, audio, streaming control, and analytics events)
- Timeline, event-based or tag-based playback
- Timeslice playback
- E-map monitoring
- Face and object detection and search function
- Object counting function (humans and 2/4 wheeled vehicles)
- LPR monitoring
- Possibility to limit user logins to specific days/time slots, preventing "unauthorized" access.
- Possibility to initialize the camera and change the default password directly from VMS
- Possibility to display a desired pop-up video on a specific Video Wall
- Real-time system status display
- SOP (Standard Operating Procedures)
- Alarm center
- SIRA support

Ossia VMS Enterprise

The Ossia VMS ENTERPRISE version (**Licence based**) holds all the capabilities of the standard version yet supports up to **10,000** cameras. Moreover, thanks to its server/client working system, it can be widely used in extensive video surveillance projects such as large retail chains, banks, or hospitality facilities.

Ossia VMS – Dedicated hardware

Management Server + Client

OC-MSCL-S (DT)-V2

Designated hardware that runs embedded Ossia VMS and supports up to 256 channels. Small, powerful, and sleek, this device can be used as a Management Server for recorders and cameras or as a client connected to other Ossia VMS servers.

Management Server

OC-MS-M (1U)

Incorporating high-performance and embedded Ossia VMS on the one hand and the ability to manage up to 512 channels on the other, this server provides a sturdy and robust solution for most security needs, especially for medium-sized projects.

Management Server

OC-MS-XL(1U)-V2

Combining high performance and embedded Ossia VMS on the one hand and the ability to manage up to 10000 channels, this server provides a stable and robust solution for most security needs.

Decoder

DEC-0104(1U)

The decoder can display up to 144 channels on four separate screens. Each of the 144 windows is dynamic, which means the user can choose to use it as a live window, a playback window, or an alarm pop-up window.

Storage Server

OC-RS-16(3U)

Provision-ISR's Storage Server is composed of 16 Hot-Swap HDD trays, built and designed to store massive amounts of data and keep it safe.

Keyboard

IP-KEY02 V2

A keyboard with an integrated joystick is designed for control rooms and operation centers. Allows you to easily view up to 144 different channels on four screens connected to the decoder and control IP PTZ cameras for sharp focus on an object in the scene.
