Hanwha Techwin's AI based solution for COVID-19

- Real-time Face Mask Detection
- Occupancy Monitoring and Management
- Bi-spectrum camera with Visible and Thermal imaging
- Quickly screening high body temperature

From surveillance to safety

While the COVID-19 pandemic is subsiding, its effects on daily life – social distancing, face coverings and limited public gatherings – are likely to remain. Now, surveillance technologies still need to monitor and protect, but also help ensure safety and health.

Hanwha Techwin is making it easier for businesses and managers of public spaces to easily and cost-effectively comply with federal and local guidelines – and keep their employees, customers and visitors safe. Our full suite of health and safety intelligent solutions can readily adapt to the requirements of any changing business environment.

Temperature Detection Thermal Camera(TNM-3620TDY)

Identification

Visible image 2MP 4mm fixed focal (H : 87.6°, V : 46.4°)

Detection

Thermal image QVGA 4.7mm fixed focal (H : 50.0°, V : 36.4°)

Bi-spectrum camera with dual lens for visible and thermal imaging

TNM-3620TDY camera features both QVGA (320x240) thermal camera with 4.7mm fixed focal lens and 2MP (1920x1080) visible camera with 4MP fixed focal lens together. This camera can quickly screen high temperature and can recognize the object (who the person is) with visible camera.

EBT(Estimated Body Temperature) mode

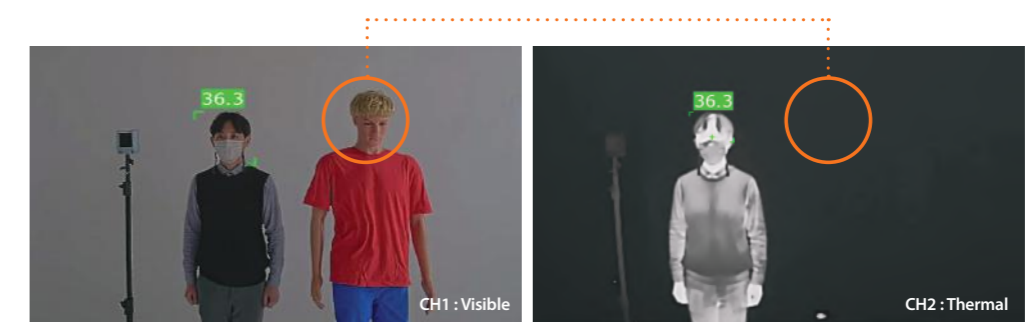

Normal radiometric mode

High accuracy with AI deep-learning technology

TNM-3620TDY utilizes built-in AI deep-learning technology to detect the human faces and generates alarms for only humans, making the monitoring more precise and efficient. Users can choose a channel between visible camera and thermal camera to detect human faces. When the thermal camera is selected as a channel to detect human faces, it only detects faces with fever. And therefore, the faces of mannequins or faces in photographs are not detected as shown in the image below. In addition, users can synchronize images of two channels by calibrating the image grid, so that the camera can detect the exact location of objects' faces and measure body temperature.

* it doesn't detect face of mannequins

Occupancy Monitoring Application

Real-time Occupancy monitoring and control

Wisenet Occupancy Monitoring Application automatically displays a red 'Wait' message along with the number of people currently inside to help customers conform to social distancing policy when the maximum occupancy of an area is reached. When numbers are below the threshold, a green "Welcome" message is displayed. The public-facing display messages are customizable and can include the name of the business in addition to 'stop' or 'go' indicators. The system can also generate alarm outputs to control automatic doors and traffic

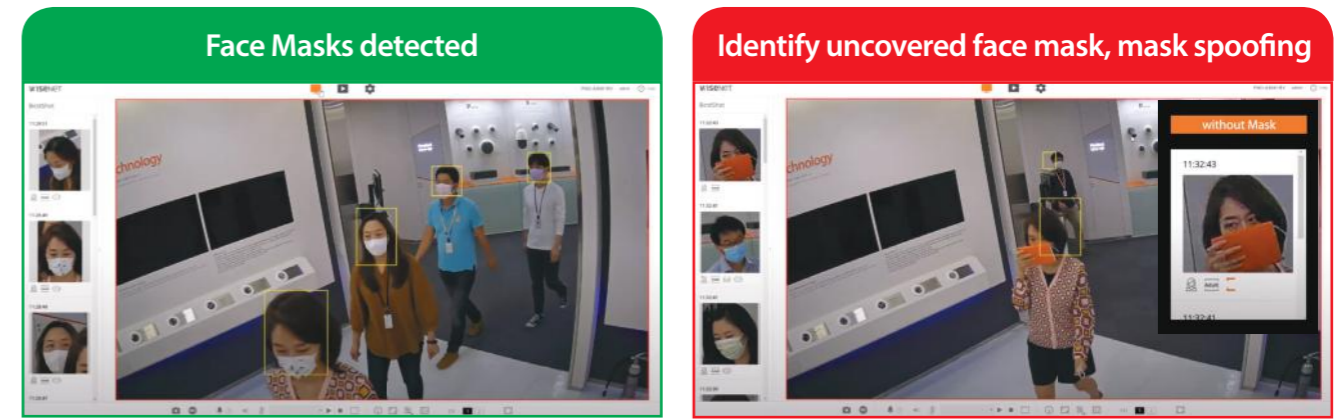

- License-free onboard AI Analytics of Wisenet P series AI cameras (Do not require a dedicated analytics server)
- No need for "top-view" mounting
- Precise edge-based analytics with Deep Learning AI
- Alarm output to automatic doors or traffic light beacons
- Customizable messages and scrolling text
- Aggregates occupancy data from up to 8 cameras at 8 entrances/exits simultaneously

Face Mask Detection

AI-based High accuracy with AI camera

Wisenet AI cameras are ideal for object detection and classification using attribute analytics. Face Masks are now part of the attribute metadata for a forensic review. Wisenet Face Mask Detection can detect if people are wearing/not wearing a face mask in real-time. If a person enters an area without a face mask or improperly wearing a face mask and provide notification to compatible VMS/NVRs.

License-free edge-based application

Hanwha Techwin's license-free AI analytics suite is included onboard with Wisenet P series AI cameras. Users don't need to purchase additional license or a dedicated analytics server. Face Mask Detection is available as a firmware update, summer 2020.

- Detection accuracy isn't affected by hats, glasses or head scarves.
- Detect multiple faces simultaneously
- Generate instant alarm (Customizable audio alarm)
- Compatible with VMS (Wisenet SSM/WAVE, Milestone, Genetec)
